

BMS Integrated Customer Billing

Accurately bill your customers for the Kaseya services you provide to them.

Eliminate hours of manual reconciliation and optimize your revenue by automatically updating BMS contracts with each customer's usage of Kaseya products.

- Reduce back-office burden by eliminating the need to manually "true-up" quantities of sell through products every month.
- Easily adopt new services without worrying about the administrative stress in recovering those vendor costs from your customers.
- Optimize your revenue by billing what you're entitled to, live consumption.
- Improve customer satisfaction, eliminate billing errors, and reduce invoice regeneration by billing right the first time.

Integrated Customer Billing details

- Easily manage multiple products as usage data from all connected products are fed to KaseyaOne which acts as the central integration hub.
- Flexibility to map customers one-to-one, or map multiple organizations to one BMS Account.
- Intuitively map consumption data from each product to BMS Services within Contracts.
- Automatically prorate charges associated with quantity updates daily, or adjust the quantity at the end of the month.

The screenshot shows the BMS Account Mapping interface. The top navigation bar includes Home, Service Desk, CRM, Finance, Projects, Reports, HR, Inventory, Admin, and New Ticket. The left sidebar lists various system components like Admin Dashboard, My Company, Locations, Company Settings, Outbound Email, Custom Fields, Lists, Company News, Administrative Work, Auth & Provision, IT Glue Settings, Cytracom Integration, Business Process, HR, CRM, Security, Finance, Service Desk, Inventory, Logs, and Imports. The main content area is titled 'Account Mapping' and shows a search bar for 'Active Accounts' with 20 of 62 results. Below the search bar is a table with columns for Account, Compliance Manager, Cyber Hawk, and Network Detective Pro. The table lists various companies and their corresponding BMS accounts.
